1

MATURED SYSTEM

Based on our nine years of real-time implementation by a variety of valet parking service providers and the locations where they operate their services, such as hotels, hospitals, commercial buildings, residential areas, shopping centers, and restaurants, the software is well-developed.

2

COMPACTABLE WITH THIRD-PARTY SOLUTIONS

Any third-party service, such as a payment gateway, an SMS gateway, or your current internal software, can be integrated without causing any issues.

Our technical professionals will provide
API Integration support

3

FLEXIBLE VALET TICKETS

Our Valet Parking System is compatible with Pre-printed Tickets, System-generated Tickets, Plastic Reusable Tickets, and E-tickets By SMS or WhatsApp Share.

4

6 STAGE TICKET LIFE CYCLE

The Check-in, Parked, Requested, On The Way, Ready For Collection, and Check-Out stages are the six primary stages of the Valet Ticket Cycle. However, depending on the needs of the operation location, these stages may be utilized.

5

Q-DISPLAY SYSTEM WEB LINK

Location with the busiest engagement valet parking The Q Display technology has many benefits. The actual status of the requested car, whether it is in transit or available for pickup, will be displayed on the screen. As a result, lobby users can operate more productively

6

WHITE LABELED & MULTI-TENANT SYSTEM

The entire Valet Parking Software can be entirely customized with your company's logo, and you will be able to easily build many customer locations and manage Valet Parking Operations using this system. Furthermore, the super admin has full system administration and access to all customer location users and master reports.

7

6 STAGE TICKET LIFE CYCLE

The Check-in, Parked, Requested, On The Way, Ready For Collection, and Check-Out stages are the six primary stages of the Valet Ticket Cycle. However, depending on the needs of the operation location, these stages may be utilized.

8

HARDWARE INDEPENDENT

Our valet parking software solution operates seamlessly on any device using a web browser and a 20 Mbps internet connection owing to the system's tremendous flexibility, making it independent on any specific hardware.

9

MULTIPLE USER ROLES & MASTER SETTINGS

The amount of assignable user roles varies depending on the operating environment. Users of the lobby are sufficient to manage key room management and some location vehicle collections. However, some processes call for more complex setups, such as multiple entries and multiple key rooms. In these situations, it is vital to have a large user base, such as users in the lobby who supervise the entryway and users in the key room who supervise the parking lot's keys. Similarly, certain operating site clients need the finance team to watch over real-time transactions after which access to reports should be required. Your valet parking business will become more productive and efficient thanks to our system's incredible adaptability, which can manage any challenging circumstance.

A Complete Valet Parking Automation

10

SELF-CHECK-IN & SELF-CHECK-OUT QR CODE

this is an extremely great feature that guests can use the QR code to order the car before they go to the automobile collecting location. Similar to that, the lobby area may include a significant QR code that visitors can scan and enter their phone number or number plate to self-check in.

After self-check-in is complete, the valet attendant will drive your car to the parking lot.

11

WHITE LABELED & MULTI-TENANT SYSTEM

The entire Valet Parking Software can be entirely customized with your company's logo, and you will be able to easily build many customer locations and manage Valet Parking Operations using this system. Furthermore, the super admin has full system administration and access to all customer location users and master reports.
